

### 3. Smart Building Summit

May 2, 2019 | Internationales Congress Center Dresden | Germany

---

#### Call for Papers

Smart home systems and building automation technologies are advancing: from energy-autonomous, maintenance-free sensors and actuators to energy-saving wireless protocol and cross-system home and building automation management systems. As part of virtual power plants and other IoT networks, buildings are already growing together to form smart cities.

At the **3rd Smart Building Summit** on May 2, 2019 in Dresden, participants will learn about the latest market forecasts, showcase projects, the most recent technologies, products, applications and business models in the field of Smart Home and Smart Building.

In addition to top-class specialist presentations, the personal exchange between experts and industry members traditionally plays a major role. Take the opportunity and present your paper to a committed audience of experts.

#### Papers may be submitted on subjects including the following:

- Embedded systems, controllers, sensors and actuators for Smart Buildings
- Integration of electromobility
- New developments in radio and wireline communication, mesh technologies etc.
- Technical developments in building management and networking
- Technological best practice examples and success stories from pilot projects and everyday life
- Sector coupling of transport, building heating and energy supply
- Smart Meter Gateways as anchors of trust for Smart Homes, Buildings and the real estate sector

(These are only suggestions and not an exhaustive list of possible lecture topics!)

As a speaker at the event you have exclusive enjoyment of the culinary highlights, snacks and beverages, and have free access to all other presentations of papers — the right surrounding to tie up and communicate with high-caliber specialists, customers and colleagues.

We are looking forward to receiving your submission by **February 5, 2019** at [www.smart-building-summit.de](http://www.smart-building-summit.de)
